

Project Proposal: Sleep Disorders in Minority Populations

I found some data on sleep disorders on the website for the Centers for Disease Control and Prevention. I would like to compare this data to the minority populations here in the US. I plan on using Life mode 7 Ethnic Enclaves to start of this research. I have already noticed a trend in sleep disorders being more common in the Eastern parts of the United States. This is typically where there is more of a higher minority population but more specifically African American population. I would like to compare these maps and see if this data matches or if this is just by coincidence.

These are the sources used to make my proposal.
